

SoilBuilder

Recommended applications

McGill *SoilBuilder* is a truly versatile product designed to meet a range of needs. Use as an important soil amendment or top-dressing in lawn and garden, or as a important component of soil blends and on-site manufactured topsoil.

Just a few of the recommended areas of use include:

- Landscaping, gardening, and erosion control.
- Turfgrass (seed and sod) and sports turf.
- Nursery applications like soil blends and container mixes.
- Biofiltration and bioremediation (e.g. constructed wetlands/ landfill cover).

This versatility is achieved by tailoring mixes to specific applications:

Application	Mix
Topdressing	Add up to ¼ inch of compost Optimal results when combined with core aeration
Soil amendment	1 inch of compost for every 3–4 inches of desired incorporation depth
Blends and mixes	Up to 30% compost
Topsoil	Blend 1 part compost with 2 parts native soil

*Always base your application rate on soil tests and compost analysis.

Versatile premium compost for healthy soil

McGill *SoilBuilder* is a premium product ideal for use as a topdressing, soil amendment, or mix ingredient.

Manufactured from 100% composted biodegradable materials, this quality compost has a loose, even texture with no unprocessed chunks of wood or bark. With optimal moisture content – not too dry, not too wet – McGill *SoilBuilder* is a rich deep brown color with a satisfying earthy aroma.

The McGill advantage...

All our composts are manufactured in our indoor, computer-controlled facilities. Optimal conditions superior products or a superior product.

It's the scientific enhancement of nature's own recycling process and delivers:

	Higher yields with less chemicals	Create healthier soil structure and increase organic matter essential to key soil processes and organisms.
	More water where you need it	Improve growing conditions by boosting the water-holding capacity of your soil and keeping more moisture at the root zone.
	Improved drainage	Reduce water-logging after heavy rain or overwatering through increased pore space, allowing water to percolate more quickly.
	Slow release	Get more nutrients to the root zone and hold them there for slow release through high Cation Exchange Capacity (CEC).
	Reliable performance	Depend on year-round supply and consistent results due to our climate-controlled processing.

Proud Member of the

US Composting Council

Premium compost for consistently premium results

McGill's 365/24/7 computer-controlled processing delivers a uniform and consistent product for predictable results every time, and our high production volumes mean we can meet the quantity requirements of your biggest jobs any time of the year.

The Seal of Testing Assurance (STA) symbol is your assurance that your compost has been tested and certified in accordance with the United States Composting Council's (USCC) STA program.

McGill *SoilBuilder* compost is tested every month to maintain its STA certification, and we are happy to provide a copy of a recent STA lab report and explain how each parameter impacts compost quality and intended use. Simply contact your sales representative.

McGill *SoilBuilder* compost meets all three US Composting Council's STA program.
